SUMMARY

Customer-facing software engineer with 4+ years shipping production systems and 10+ years across consultative sales, technical support, and operations. Own delivery from requirements discovery through implementation, deployment, troubleshooting, and user enablement across retail/POS, payments, transportation, government, public health, and AI-enabled workflows. Deepest in TypeScript/JavaScript and C#/.NET; broad across React, Angular, Ionic, SQL, Azure, APIs, hardware integrations, automated testing, and LLM/agent workflows.

SKILLS

Engineering: TypeScript/JavaScript, C#/.NET, React, Angular, Ionic, Node.js, REST APIs, SQL Server, PostgreSQL, Azure, GitHub Actions, Azure DevOps, Playwright, Cypress, WebSockets, offline-first systems

Forward-Deployed / Solutions: Requirements discovery, workflow mapping, rapid implementation, systems integration, production troubleshooting, stakeholder communication, product demonstrations, user education, consultative sales

AI & Automation: LLM/agent workflows, tool use, prompt/context design, workflow automation, human-in-the-loop validation

Languages: Spanish (Native), English (Professional working proficiency)

EXPERIENCE

Business Computer POS (BCPOS) | Software Developer - Production Systems & Integrations Sep 2025 - Present

San Juan, PR

- Owned delivery across web, mobile, kiosk, backend, database, and hardware-integrated systems used in POS, payments, transportation, and operational workflows, from stakeholder requirements through production support.
- Shipped a bilingual medical-transport driver PWA on Azure with real-time WebSocket dispatch, adaptive polling, offline sync, WCAG accessibility, 200+ automated tests, and CI/CD, giving field drivers a resilient workflow even with unstable connectivity.
- Built a Node.js/TypeScript hardware bridge integrating Epson, Star, and TSC printers plus barcode scanners over USB, serial, and Ethernet, reducing the gap between browser-based POS workflows and physical store hardware.
- Diagnose application, API, database, deployment, and hardware failures in production; translate root causes and technical trade-offs into clear actions for non-engineering stakeholders.
- Use LLM and agent tooling for repository analysis, implementation, testing, review, and constrained workflow automation while retaining deterministic validation and human approval.

Tech First | Frontend Developer (Contract) May 2025 - Sep 2025

Remote

- Built Angular/TypeScript workflows for a document-driven investigation platform using Azure Document Intelligence and Blob Storage; converted business requirements into reusable UI and validated APIs across Docker and Oracle environments.

Truenorth Corporation | Developer I Feb 2023 - Mar 2025

Puerto Rico / Remote

- Delivered government-facing C#/.NET and SQL applications from requirements clarification through release and maintenance in Azure DevOps.
- Worked directly with product, QA, and business users to reproduce defects, clarify ambiguous requirements, resolve production issues, and communicate technical constraints.

Require Technology | Software Developer / QA (Contract, Concurrent) Sep 2023 - Dec 2024

Remote

- Supported a regulated public-health application using Angular, TypeScript, SQL, and API troubleshooting; improved E2E reliability by moving browser testing from Cypress toward Playwright and documenting reproducible failures for engineering.

SELECTED PROJECTS

Safe Shores - Built and deployed a bilingual public-safety platform covering 100+ Puerto Rico beaches with NOAA/NWS marine and weather integrations, geolocation, alerts, and PWA behavior.

AI SMS Lead-Response System - Built an LLM-driven workflow that qualifies and responds to inbound leads using structured business rules and human escalation.

VendeYa - Built a Next.js/Supabase listing-distribution and lead-pipeline product for automotive sales with queue-driven browser automation.

EARLIER CUSTOMER-FACING EXPERIENCE

T-Mobile - Mobile Expert (2019-2021): Consultative device and plan sales, technical education, account support, and connectivity troubleshooting. | AT&T - Customer Service & Sales Representative (2015-2017): Wireless product/service recommendations, account transactions, and device/service troubleshooting. | Earlier: Claro field-sales/technician support, Club Demonstration Services product demos, Pueblo Supermarkets bagger/cashier, automotive sales/BDC, USPS, and customer-support roles.

EDUCATION

University of Puerto Rico at Bayamón - Computer Science coursework
