SUMMARY

Systems Architect and Full-Stack Engineer with 5+ years of experience delivering enterprise-grade web, mobile, kiosk, and POS applications across React, .NET, Angular, Ionic, and Azure. Sole engineer who architected and shipped 4 production systems in 6 months — a payment kiosk platform, two medical transport logistics portals, and a retail POS app — each from database schema to cloud deployment. Designed a repeatable AI-directed development methodology that consolidates architect, developer, QA, and reviewer roles into a single seat, delivering at team-level velocity as an individual contributor. Delivered compliant systems across PCI DSS, HIPAA-adjacent, and government regulatory frameworks. 100% remote since 2021. Bilingual: English (advanced) / Spanish (native).

SYSTEMS IMPACT

- **4 production systems in 6 months as sole engineer —** from database schema to cloud deployment
- **50+ POS integrations maintained** across payment gateways, pharmacy, and e-commerce platforms
- **AI-directed development workflows** delivering at 3-5x traditional team velocity
- **Offline-first, resilient systems** handling hardware devices, payment processing, and real-time logistics
- **Cross-domain compliance: PCI DSS, HIPAA-adjacent, and government regulatory** domains

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, SQL, HTML5, CSS3

Frontend: React 19, Angular 20, Ionic 8, Vite, TailwindCSS 4, TanStack Query, Zustand, Zod, i18next, React Router 7

Backend: .NET 10, ASP.NET Core, Entity Framework Core, Node.js, REST API Design, Minimal APIs

Mobile/Desktop: Ionic + Capacitor (iOS/Android), WPF + WebView2 (Kiosk), Progressive Web Apps (PWA)

Cloud & DevOps: Azure App Service, Azure SQL, Azure Static Web Apps, Bicep IaC, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS

Databases: SQL Server, Azure SQL, Entity Framework Core, Temporal Tables

Architecture: Clean Architecture, Microservices, Offline-First Sync, Event-Driven Patterns, Circuit Breaker / Retry / Bulkhead (Polly), Idempotency Design

AI Orchestration: Claude Code, AI-directed phased implementation plans, project context engineering (CLAUDE.md), automated code review pipelines, runtime validation schema design

Testing: Vitest, Playwright E2E, Jest, Cypress, Jasmine

Security: JWT Authentication, RBAC, Zod Runtime Validation, DOMPurify (XSS), CSRF Protection, Rate Limiting, WCAG 2.1 AA Compliance

Tools: VS Code, Postman, Figma, Jira, Azure Data Studio, Serilog, Git

PROFESSIONAL EXPERIENCE

Business Computer POS — *Systems Architect & AI-Augmented Engineering Lead*

Remote / Bayamon, PR | September 2025 – Present

Promoted from mid-level developer to systems architect within 3 months. Sole technical decision-maker and engineer responsible for full lifecycle delivery of enterprise systems — architecture, UI/UX design, frontend, backend, database, cloud infrastructure, QA, and production support — across 50+ active projects. Designed and operationalized an AI-directed development workflow that enables one engineer to deliver at the velocity of a 3-4 person squad.

Enterprise Payment Kiosk System (BerriosPay)

- Architected and delivered a full-stack payment platform in 3 calendar days using AI-directed phased implementation: React 19/TypeScript frontend, .NET 10/C# backend with clean architecture, WPF kiosk shell with WebView2, and Azure SQL database
- Architected a semi-integrated POS payment flow using PAX POSLink, decoupling PCI-sensitive card data from the Windows 10 IoT kiosk environment to minimize audit scope (PCI DSS SAQ A)
- Integrated Epson TM-M30II thermal printer and Touch Dynamic QK22 kiosk hardware via native WPF drivers

- Engineered a distributed idempotency strategy with SHA256 request signing, Polly-based circuit breakers, retry, and bulkhead isolation — ensuring zero duplicate transactions across 25+ high-volume kiosks
- Built offline queue with automatic sync recovery, enabling kiosks to continue operating during network outages
- Delivered bilingual (EN/ES) PWA with WCAG 2.1 AA accessibility, 48px touch targets for kiosk use

Medical Transport Logistics Platform (GoFleetCare)

- Architected and delivered two separate driver portals (GOFLEETCARE-WebApp and CDD-HUB-WebApp) for different user personas in the same HIPAA-adjacent medical transport ecosystem
- Built mobile-first driver portal with real-time trip management, geofencing, signature capture, and push notifications via Firebase
- Designed 13-state backend status flow mapped to 8 frontend states with client-side rate limiting (2s debounce, 10/min cap) to prevent status race conditions
- Implemented mutex-pattern token refresh to eliminate JWT race conditions across concurrent API calls
- Delivered offline mutation queue ensuring trip status updates survive connectivity loss and sync automatically on reconnect
- Implemented WebSocket real-time communication, PDF report generation, and dark mode across the driver portal suite
- Built comprehensive test suite growing from 91 to 215 tests during QA phase, covering unit, integration, and E2E scenarios
- Shipped CDD-HUB from first commit to production-deployed PWA with 215 automated tests in 3.5 weeks

Retail POS & Distribution Systems (50+ Projects)

- Maintained and extended 50+ retail POS integrations across payment gateways (Evertec, Cayan, DynaPay), pharmacy systems, and e-commerce platforms (BigCommerce) with modular .NET connector services and RMS extensions
- Built tablet-based Ionic/Capacitor POS application (saludMedica) with cash checkout, membership management, and native hardware integration (Star Micronics printer, cash drawer) for Android deployment

AI-Augmented Engineering Methodology

- Designed and maintain structured AI development workflows: CLAUDE.md project context files, 7-phase build plans, custom slash commands, and automated code review pipelines — enabling consistent, repeatable zero-to-production delivery across projects
- Operate as architect, designer, developer, QA tester, and code reviewer in a single role — evaluating AI-generated code for correctness, security (XSS, CSRF, injection), performance, and accessibility compliance before every merge
- Reduced multi-month project timelines to weeks, measured across 4 sequential production deployments in 6 months
- Accelerated personal delivery velocity from 9 commits/month to 54 commits/month over a 6-month period as the methodology matured

Highspring Digital — *Frontend Engineer*

Remote | March 2025 – August 2025

- Built and optimized Angular/TypeScript client-facing web applications in Agile sprints
- Improved page load performance by 30% through lazy-loading implementation and state management optimization
- Ensured responsive design and accessibility compliance across multiple client projects
- Collaborated with backend engineers and designers to align data models with UI components

Dept. of Health of Puerto Rico — *Software Developer*

Remote, PR | 2022 – March 2025

- Developed Angular-based features for internal public health platforms serving Puerto Rico's healthcare infrastructure
- Implemented JWT authentication and role-based authorization for HIPAA-adjacent security compliance
- Built data-driven features using SQL Server and Azure Data Studio for epidemiological reporting
- Contributed to CI/CD pipelines via GitLab and participated in Agile ceremonies and code reviews

Require Technology — *QA Associate / Software Developer*

Remote, PR | 2022 – 2023

- Built React frontend components with reusable hooks and modern component patterns
- Led migration from Cypress to Playwright, improving cross-browser test stability and reducing E2E test execution time
- Supported cloud deployments on AWS and provided QA insights that improved release quality

Truenorth Corporation — *Software Developer I*

Remote, PR | 2021 – 2022

- Developed .NET backend modules and SQL Server integrations for government-facing digital platforms
- Implemented automated deployment pipelines using Azure DevOps
- Collaborated cross-functionally with designers and QA to ensure consistency and scalability

EDUCATION

Associate's Degree — Computer Science

University of Puerto Rico | 2023 – 2025

KEY HIGHLIGHTS

- **4 production systems in 6 months —** architected and delivered solo, each from database schema to cloud deployment, across different tech stacks and compliance domains
- **50+ POS integrations** maintained across retail, payment, pharmacy, and e-commerce domains
- **Cross-domain compliance —** delivered systems under PCI DSS, HIPAA-adjacent, and government regulatory frameworks
- **Measurable acceleration —** delivery velocity increased 6x over 6 months through continuous refinement of AI-directed engineering methodology
- **100% remote** since 2021 — experienced in async communication, self-directed delivery, and autonomous project ownership
- **Bilingual:** English (advanced) / Spanish (native) — built multiple bilingual production applications
- **Full lifecycle ownership:** architecture, design, development, testing, deployment, and production support as sole technical decision-maker
