

LUIS RODRIGUEZ RIVERA

AI ENGINEER · FULL-STACK ENGINEER

787-980-5868 | luisangelrod17@gmail.com | luisrodriguezdev.netlify.app | github.com/luisangelrod | linkedin.com/in/luisrodriguez515

SUMMARY

Full-stack engineer who ships owned products end-to-end — architecture, code, AI integration, and QA. Recent work centers on putting LLMs behind hard boundaries: the model interprets, a deterministic engine decides, a human approves. B.S. Computer Science, WGU, expected December 2026.

TECHNICAL SKILLS

AI Engineering LLM integration (Claude API — tool_use, structured output, SSE streaming), constrained-generation and LLM-as-classifier patterns, rules-engine hybrids, agentic workflows, MCP, LLM evaluation, AI-augmented development with enforced verification gates

Languages & Frameworks TypeScript, C#, Python, SQL, JavaScript · React 19, Next.js, Angular, Node.js · ASP.NET Core / .NET 10, EF Core, .NET Aspire

Cloud & Data Azure (App Service, Static Web Apps, Azure SQL), SQL Server, PostgreSQL, Vercel, Docker, Git, CI/CD, REST API design, multi-tenant data isolation

Quality Playwright E2E, visual-regression auditing, Vitest + Testing Library + MSW, Jest, PR-gated type/lint/test enforcement · Spanish (native), English (advanced)

EXPERIENCE

Business Computer POS (BCPOS) San Juan, PR

Sep 2025 – Present

Software Developer

- Sole engineer and architect of **KM Fitness**, a production multi-tenant coaching SaaS platform (React 19 / .NET 10 / EF Core) — **390 of 397 commits across 340+ reviewed PRs** — designing row-level tenant isolation via EF Core global query filters from day one to support a B2B network roadmap.
- Designed a **four-layer LLM-in-the-loop engine**: the model converts messy natural-language input into structured constraints, a deterministic rules engine composes the output from a curated library, and a human approves before delivery — making it structurally impossible for the model to author a prescription in a liability-sensitive domain.
- Delivered **BerriosPay**, an enterprise in-store payment platform for a major Puerto Rico retail chain, on .NET 10 clean architecture — running on physical POS kiosks (PAX A920, Epson, Star) with Azure SQL and App Service, including transaction deduplication and reconciliation safeguards.
- Built **Qiub**, a multi-application portal on a .NET Aspire monorepo spanning admin, customer, and POS surfaces with a shared React design-system package.
- Expanded automated test coverage **136% (91 → 215 tests)** and led a 3-engineer team in adopting a **5-stage AI-assisted release evaluation workflow** — all generated code clears the same typecheck, unit, E2E, and visual-regression gates as hand-written code.

Handshake AI Remote

Jun 2026 – Present

Software Engineer, AI Training Data (Contract)

- Develop structured datasets and evaluate foundation-model agent behavior across **19 application categories**, documenting failure modes and edge cases with the evaluation team.

Vaco by Highspring Remote

Mar 2025 – Aug 2025

Frontend Engineer (Contract)

- Accelerated document processing **30%** with Angular and TypeScript workflows built on Azure Document Intelligence, JWT-secured APIs, lazy loading, and state optimization; delivered 15+ components across sprint-driven releases.

Puerto Rico Department of Health Remote

Jan 2023 – Mar 2025

Software Developer (Contract)

- Led 10+ Angular public-health features serving Puerto Rico's **3.2M residents**, shipping JWT-secured SQL workflows and GitLab CI/CD pipelines; refactored 5+ legacy modules in a compliance-driven environment.

Truenorth Corporation Remote

Jan 2023 – Jan 2025

Software Developer (Contract)

- Owned C#/.NET modules, SQL Server schemas, stored procedures, and reporting tools powering platforms across **6+ government agencies**.

Require Technology Remote

Jan 2022 – Dec 2023

Software Developer / QA Associate (Contract)

- Led a Playwright migration from Cypress that cut QA cycle time **60%** across 3+ React applications.

SELECTED PROJECTS

- AI QA Agent** Next.js 15, React 19, Claude API [live](#) — Audits deployments for accessibility, SEO, performance, security, and broken links using Claude tool_use and SSE streaming, returning graded reports.
- Safe Shores** Next.js, NOAA/NWS APIs, PWA [live](#) — Bilingual public-safety PWA for Puerto Rico beaches with real-time hazard data, tide forecasts, geolocation, and offline support.
- ProofLoop** LLM evaluation, automation — Deterministic AI review loop with independent model evaluation, correction cycles, regression evidence, and human acceptance gates.

EDUCATION

Western Governors University

Expected Dec 2026

B.S. Computer Science (in progress) — credits transferred from University of Puerto Rico at Bayamón
